JUNE 13, 2022

For Operational Period: June 6, 2022—June 13, 2022

WORLDWIDE

540,633,117 Cases

6,331,768 Deaths

UNITED STATES

85,344,502 Cases

1,006,451 Deaths

MICHIGAN

2,229,169 Cases

33,566 Deaths

OUT-WAYNE COUNTY

272,400 Cases

4,102 Deaths

SITUATIONAL AWARENESS

- Wayne County is currently within **HIGH** Covid-19 community levels.
- Wayne County dashboard may be found at www.waynecounty.com/COVID19dashboard for latest community updates.
- Wash your hands often. Use soap and water for at least 20 seconds. If you do not have soap and water, use hand sanitizer with at least 60% alcohol. —**CDC**
- Antigen tests are effective and quick screening tests, meaning they are good detecting those that are at highest risk at transmitting the virus to others, even for those who do not appear sick (i.e., asymptomatic). —**CDC**
- Antigen tests result in 10-15 minutes and do not need to be sent to a lab to get the results. This means actions can be taken sooner regarding isolation and contact tracing. They are helpful in settings where a large number of people need to get tested quickly and/or regularly, and in community settings. —**CDC**
- If you test positive for COVID-19 or if you have been exposed it is important that you immediately take steps to get the care you need and avoid giving COVID-19 to people around you -Contagious: You can be contagious two days before symptoms appear (or two days before test date if positive and no symptoms) through the end of the isolation period. —**MDHHS**
- MDHHS continues to recommend the use of layered mitigation strategies for Michiganders, including vaccination, masks, testing, and isolation/quarantine as needed. —**MDHHS**
- As a reminder: Coronavirus disease (COVID-19) is an infectious disease caused by the SARS-CoV-2 virus. Most people infected with the virus will experience mild to moderate respiratory illness and recover without requiring special treatment. Anyone can get sick with COVID-19 and become seriously ill and die at any age. The best way to prevent and slow down transmission is to be well informed about the disease and how the virus spreads. The virus can spread from an infected person's mouth or nose in small liquid particles when they cough, sneeze, speak, sing or breathe. These particles range from larger respiratory droplets to smaller aerosols. —**WHO**
- Talk to your doctor about whether you should get antibody or antiviral treatment, and where you can find treatment. **Therapeutics are authorized for people who meet select criteria.** [Vaccinations](#) remain the best way to protect from COVID-19. —**MDHHS**

ACTIONS TAKEN

- The Public Health Emergency Operations Center (PHOC) is at FULL ACTIVATION.
